EXPERIENCE

Aprix

Feb. 2026 – Present

Associate Machine Learning Engineer

- Eliminated a major revenue overestimation blind spot by deploying an end-to-end ML pipeline (Logistic Regression + Pipedrive integration) that replaced non-audited sales assumptions with data-driven win probabilities for active deals, enabling accurate financial projections with a 8.13% error margin in Q1 2026 via automated CI/CD workflows.
- Automated the end-to-end Identity and Access Management (IAM) lifecycle for corporate platforms and production PostgreSQL flexible servers, securing approximately 8.4 hours of manual effort per week across a monthly volume of 292 audit-tracked tickets, by designing a modular Python serverless solution on Azure Functions.

Aprix

Nov. 2025 – Jan. 2026

AI Trainee

- Reduced incident triage latency by 5–10 mins/ticket for the Customer Support team, preventing SLA-driven financial losses with enterprise clients (e.g., Ipiranga, Seara), by automating the full routing pipeline in n8n to ingest OTRS tickets, extract client context, trigger real-time Discord alerts, and auto-generate Kanban cards.

Amazon

Apr. 2025 – Oct. 2025

Business Intelligence Engineer Intern

- Led an end-to-end PoC in Amazon EU middle-mile operations to define 24h/48h labor-planning guardrails for 10 UK Sort Centers, where operations needed reliable 24h/48h guardrails to adjust workforce capacity with lower execution risk.
- Built and experimentally validated ML pipelines in AWS SageMaker Studio against operational heuristics (fixed assumptions and moving averages), observing a 27.4% uplift in same-day forecasting performance in PoC tests.

FlexSim Brasil

Feb. 2023 – Apr. 2023

Data Scientist Intern

- Eliminated software crashes during large-dataset imports by engineering token-based batch processing workflows of 50,000 rows per chunk, seamlessly integrating SQL database connections and C++ logic within the simulation environment.
- Conducted an analysis of possible no-code Machine Learning frameworks, which resulted in RapidMiner being identified as the best viable option due to its ease of use and available features

Instituto de Pesquisas Eldorado

Feb. 2022 – Sep. 2022

Data Scientist Intern (Motorola-funded R&D)

- Eliminated manual triage bottlenecks and improved fault-detection precision to 73% by replacing an unmaintainable, rule-based system with an end-to-end Machine Learning pipeline for battery telemetry anomaly detection.
- Expanded domain experts' diagnostic criteria with data-backed insights, leveraging Explainable AI (SHAP values) to translate complex, hidden telemetry patterns into stable, production-ready predictive signals.

EDUCATION

École CentraleSupélec, Université Paris-Saclay

Aug. 2023 – Oct. 2025

Master in Engineering, Specialization in Artificial Intelligence

France

- Graduated from a top-tier European Grande École (QS Top 15 globally in Engineering).

State University of Campinas (UNICAMP)

Mar. 2020 – Expected Dec. 2026

B.S. in Industrial Engineering

Brazil

TECHNICAL SKILLS

Core Engineering & Languages: Python, SQL, C/C++

Machine Learning & Data: scikit-learn, Explainable AI (XAI), Causal Inference, A/B Testing, Pandas, NumPy, SciPy

MLOps, Cloud & Pipelines: AWS SageMaker, Azure Functions, Azure DevOps (CI/CD), Docker, Git, n8n

Databases: PostgreSQL, MySQL
