EXPERIENCE

Aprix

Feb. 2026 – Present

Associate Machine Learning Engineer

- Building and deploying a production ML forecasting pipeline that replaces non-audited quarter-over-quarter revenue estimation with a traceable probability-based process, including governance artifacts (held-out/CV metrics, model metadata, Azure snapshotting, and versioned outputs) for transparent stakeholder tracking.

Aprix

Nov. 2025 – Jan. 2026

AI Trainee

- Increased incident response visibility and speed by shifting the team from email-only intake to real-time OTRS → Discord → Kanban automation, cutting manual triage overhead (5–10 minutes per ticket), through event-driven routing and automatic card creation with Azure Functions.
- Improved planning under uncertainty across business units by replacing subjective deadline-risk discussions with probabilistic completion scenarios, through a Monte Carlo forecasting engine with automated data ingestion and standardized management reporting.

Amazon

Apr. 2025 – Oct. 2025

Business Intelligence Engineer Intern

- Led an end-to-end PoC in Amazon EU middle-mile operations to define 24h/48h labor-planning guardrails for 10 UK Sort Centers, combining SQL data extraction, Python feature engineering, and predictive modeling under temporal, censored, and imbalanced data constraints.
- Built and experimentally validated ML pipelines in AWS SageMaker Studio against operational heuristics (fixed assumptions and moving averages), observing a 27.4% uplift in same-day forecasting performance in PoC tests.

FlexSim Brasil

Feb. 2023 – Apr. 2023

Data Scientist Intern

- Assessed no-code machine learning frameworks and recommended RapidMiner as the most viable option for internal adoption, then trained ML engineers on practical usage.
- Automated data import workflows by integrating SQL queries with C++ simulation models, improving large-dataset handling stability.

Instituto de Pesquisas Eldorado

Feb. 2022 – Sep. 2022

Data Scientist Intern (Motorola-funded R&D)

- Improved battery fault-detection precision to 73% by reducing false positives and optimizing analysts' time/resources by 27%, through Python-based preprocessing and interpretable ML techniques (SHAP).

EDUCATION

École CentraleSupélec, Université Paris-Saclay

Aug. 2023 – Oct. 2025

Master in Engineering, specialization in Artificial Intelligence

GPA: 3.5/4.0

State University of Campinas (UNICAMP)

Mar. 2020 – Jul. 2026

B.S. in Industrial Engineering

Grade: 9.4/10

SKILLS

Programming: Python, SQL, C/C++

Machine Learning: scikit-learn, Causal Inference, Feature Engineering, Model Validation and Monitoring

Data & Analytics: Pandas, NumPy, SciPy, PySpark, Power BI

MLOps & Cloud: Docker, Git, AWS SageMaker, Azure Functions, Azure Blob Storage, PostgreSQL/MySQL
