EXPERIENCE

Aprix

Feb. 2026 – Present

Associate Machine Learning Engineer

- Corrected a major revenue overestimation blind spot and enabled accurate financial projections by deploying an ML pipeline (Logistic Regression, Pipedrive). This replaced non-audited sales assumptions with data-driven win probabilities for active deals via automated CI/CD workflows.

Aprix

Nov. 2025 – Jan. 2026

AI Trainee

- Cut incident triage latency by 5–10 mins/ticket for the Customer Support team, preventing SLA-driven financial losses with enterprise clients (e.g., Ipiranga, Seara), by automating the incident routing pipeline (n8n) to ingest OTRS tickets, extract relevant client context, trigger real-time Discord alerts, and auto-generate Kanban cards.
- Saved 3 hours/week in manual audits and prevented escalation delays by engineering a proactive governance bot (n8n) that automatically flags customer requests unanswered for 7+ days.
- Improved planning under uncertainty across business units by replacing subjective deadline-risk discussions with probabilistic completion scenarios, developing a Monte Carlo forecasting engine with automated data ingestion.

Amazon

Apr. 2025 – Oct. 2025

Business Intelligence Engineer Intern

- Led an end-to-end PoC in Amazon EU middle-mile operations to define 24h/48h labor-planning guardrails for 10 UK Sort Centers, where operations needed reliable 24h/48h guardrails to adjust workforce capacity with lower execution risk.
- Built and experimentally validated ML pipelines in AWS SageMaker Studio against operational heuristics (fixed assumptions and moving averages), observing a 27.4% uplift in same-day forecasting performance in PoC tests.

FlexSim Brasil

Feb. 2023 – Apr. 2023

Data Scientist Intern

- Eliminated software crashes during large-dataset imports by engineering token-based batch processing workflows of 50,000 rows per chunk, seamlessly integrating SQL database connections and C++ logic within the simulation environment.
- Conducted an analysis of possible no-code Machine Learning frameworks, which resulted in RapidMiner being identified as the best viable option due to its ease of use and available features

Instituto de Pesquisas Eldorado

Feb. 2022 – Sep. 2022

Data Scientist Intern (Motorola-funded R&D)

- Optimized analysts' time and resources by 27% and improved battery fault-detection precision to 73% (reducing false positives) by replacing legacy rule-based heuristics with an end-to-end Machine Learning approach.
- Leveraged interpretable ML techniques (SHAP) to uncover hidden diagnostic patterns, actively contributing to and expanding the experts' manual criteria with data-driven insights

EDUCATION

École CentraleSupélec, Université Paris-Saclay

Aug. 2023 – Oct. 2025

Master in Engineering, specialization in Artificial Intelligence

GPA: 3.5/4.0

State University of Campinas (UNICAMP)

Mar. 2020 – Dec. 2026

B.S. in Industrial Engineering

Grade: 9.4/10

SKILLS

Programming: Python, SQL, C/C++

Machine Learning: scikit-learn, Feature Engineering, Model Validation and Monitoring

Data & Analytics: A/B Testing, Causal Inference, Pandas, NumPy, SciPy, Power BI

MLOps & Cloud: Docker, Git, AWS SageMaker, Azure Functions, Azure Blob Storage, PostgreSQL/MySQL, n8n
